

Ray Cycle the Raccoon Recycles Aluminum

Aluminum is a special kind of metal used to make soda cans and other drink cans.

Through the magic of recycling, Ray loves to help turn old cans into new cans. He also has a lot of fun saying the word “aluminum.”

Ray sorts these cans out from the other metal cans and gets them really clean inside. Then, he stomps on them to get them really flat so they can all fit in his box.

Recycling turns stinky, old stuff into shiny, new stuff. Recycling also helps the places we live and play stay nice and clean.
